Dasari Sai Teja

Software Engineer — Full-Stack Developer (React + Node.js) — Hyderabad, Telangana, India
dasarisaiteja210@gmail.com — +91 9505616404 — github.com/dasarisaiteja — linkedin.com/in/Dasari Sai Teja

PROFESSIONAL SUMMARY

Adaptable, strategic learner with a collaborative mindset and expertise in React, Node.js, and Python. I develop innovative, scalable full- stack solutions in dynamic environments. My immediate goal is to enhance product performance and user experience significantly.

EDUCATION

Bachelor of Technology in Computer Science (AIML) — Malla Reddy Engineering College, Hyderabad *2021 – 2025*
CGPA: 7.00/10
Additional Training: Full Stack Web Development (Internshala, 2025 - 2026)

TECHNICAL SKILLS

Languages & Runtime: Node.js, JavaScript, Python, C, Java, HTTP
Backend & APIs: Express.js, RESTful APIs, JWT Authentication, Role-Based Access Control (RBAC), Webhooks, API Integration, API Testing, Rate Limiting, CORS
Database: MongoDB, Mongoose (ODM), schemas, indexing, aggregations, transactions (sessions), data modeling, MySQL
API Tools: Postman, Swagger, OpenAPI Specification
Integrations: Razorpay (orders, webhooks, verification), third-party REST APIs
Frontend: React.js, Redux, React Native, Tailwind CSS, HTML, CSS, Android, iOS
Tools: Git, GitHub, Expo, Android Studio, Xcode

WORK EXPERIENCE

Path Creators, — Developer-Internship (Virtual) *May 2023*
- Developed a Movie Recommendation System based on sentiment analysis of micro-blogging data.
- Utilized Java for core logic development and SQL for database management.
- Implemented Natural Language Processing (NLP) techniques for sentiment analysis.

Trevia EV, — Full Stack Developer *Present*
- Developed and enhanced EV charging mobile application and CMS interfaces using React Native, Expo, and TypeScript, focusing on reusable components and improved user experience.
- Integrated and debugged REST APIs for charging stations, bookings, wallet, and user management modules.
- Performed application testing, resolved UI and API integration issues, and collaborated through Git/GitHub workflows, including branch management and pull request reviews.

PROJECTS

E-commerce website E-commerce
Backend: Node.js, Express.js, MongoDB — Frontend: React.js, Redux, Tailwind CSS
- Developed backend APIs for product listings, categories, and brand data.
- Designed schemas and indexing strategies for fast product and category retrieval.
- Implemented admin APIs to manage products, categories, and images.
- Developed and integrated React frontend applications to display products and categories via REST APIs.
- Implemented an image upload and image-optimization pipeline using Multer and Sharp.

YouTube inspried platform YouTube-Clone
Backend: Node.js, Express.js, MongoDB, JWT, CORS — Frontend: React(Vite), Tailwind CSS
- Designed a platform similar to YouTube using the MERN stack, integrating responsive UI and video uploads.
- Used JWT to implement secure user authentication and session management.
- Engineered a system for video management with upload functionalities and user interaction features like likes, comments, and video sharing.

Weather Forecast Application WeatherForecast
Third-part APIs: Weather API (OpenWeatherMap) — Frontend: HTML3, CSS3 with Tailwind CSS framework
- Engineered a responsive, interactive weather application providing real-time, location-specific weather updates through a user-friendly interface.
- Utilized JavaScript and asynchronous API calls to dynamically fetch and render weather data on the DOM, ensuring consistent cross-device accessibility and data efficiency.

WorkSphere - Multi-Tenant HR & Operations Management Suite WorkSphere
Backend: Node.js, Express, MongoDB & Mongoose, JWT — Frontend: React.js, Vite, Redux Toolkit
- Developed a multi-tenant ERP SaaS platform using React.js, Node.js, Express.js, and MongoDB with JWT authentication, role-based access control, and secure tenant-specific data isolation.
- Built scalable REST APIs for employee, project, task, attendance, payroll, and leave management with optimized database design, validation, and secure CRUD operations.
- Designed a responsive React dashboard using Redux Toolkit and Tailwind CSS, enabling role-based workflows, real-time data management, and an intuitive user experience.
